

## KISS CUT STICKERS

Kiss Cuts are light surface cuts on your sticker. There can be multiple kiss cut stickers to make a sticker sheet. Kiss Cuts do not cut the backing material, so the kiss cut shapes peel off the sheet.

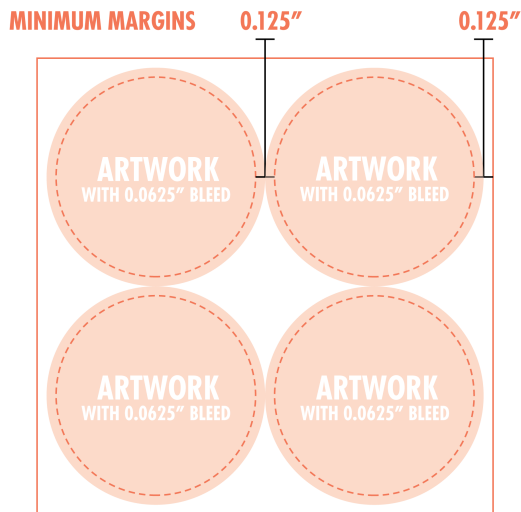

### FILE SETUP TEMPLATE FOR KISS CUT STICKER SHEETS:

Setup the whole sheet to the final trim size and include 1/8" bleed if necessary. Also ensure you leave 1/8" type safety within the trim line before setting up your stickers.

Setup the individual stickers on the sheet (use relatively simple shapes – anything too detailed will be more difficult to cut) and ensure there is 1/8" between each cut line. So where 2 kiss cut stickers are side by side, there is **1/8" total**.

Each kiss cut sticker needs **at least 1/16" bleed** and safety (but preferably more). The bleed and safety should match, so if there's shifting during cutting, it will cut through the same background.

The diecut layer in your file should be saved as a separate spot colour that is in the correct position and is labelled "Diecut Layer". It should not be part of the other 4 colour artwork.

Here are some sample pics of kiss cut sticker sheets:
